

What is a 3D printer?

A 3D printer is a device that allows to produce any possible object using the FFF method. This innovative technology involves depositing molten thermoplastic layer by layer until the desired shape is achieved. You can see this process [here](#).

About our product

We created our device with design offices and individual creators in view. Our 3D printer allows production of professional models that will satisfy even the most demanding customer. You can have a look at examples of such models on our site for [designers](#).

Together with the printer we guarantee technical support, product software and an instruction manual. We also provide plastic filament. We do not leave our customers to their own devices.

For more information please visit our [website](#) or, alternatively, come to our office in Kraków in ul. Ślusarska 9, where you can see our printers yourself. Should you have any questions, drop us a line at pirx@pirx3d.com.
